

Name of the Programme: Internet Awareness Programme

Department: Computer Science

Date: 13th December 2023

Coordinator: Smt. K S Sukrutha, Assistant Professor & Head

Participants: Students of Government High School, Lakshmipuram, Mysore

Number of Beneficiaries: 25

Objective of the Programme:

The Internet Awareness Programme by the Department of Computer Science aimed to educate Government High School students about the benefits of computers and the internet, fostering creativity and confidence in technology. Through hands-on training, it provided knowledge on fundamental computer concepts and practical use of tools.

About the Programme:

The Department of Computer Science conducted an Internet Awareness Programme aimed at educating nearby Government High School students on the profound impacts and utilities of computers and the internet. Recognizing that a computer with internet access is one of the most powerful tools available for education, the programme was designed to enhance students' learning experiences, spark their creativity, and build their confidence in utilizing technology. The ultimate goal of this initiative is to empower students to become better thinkers and innovators, equipping them with the skills needed for higher education and beyond, and enabling them to lead India into a brighter future.

The programme focused on several key objectives aimed at transforming students into more knowledgeable and adept users of technology. With active involvement from the entire faculty and selected students of the department, the initiative provided hands-on training and demonstrations. This community-oriented activity served not only to educate but also to inspire students to harness the full potential of technological advancements.

During the programme, students gained a comprehensive understanding of fundamental concepts related to computers and the internet. They were introduced to the practical use of web browsers, enabling them to navigate the vast expanse of the web efficiently. Students learned the importance of search engines such as Google, mastering how to search for, download, and read content on specific topics of interest.

Moreover, the training covered the use of essential tools like MS Word and the internet for creating and sharing documents. An introduction to using YouTube emphasized accessing educational materials and tutorials. These skills are crucial in today's digital world, where being proficient with technology can significantly enhance one's educational journey and personal growth.

The outcome of the programme : Students left with a clear understanding of how to utilize technology to aid their studies and foster their personal development. They were not only taught to use these tools but were also encouraged to explore and discover how technology can unlock new opportunities for learning and creativity. This initiative, by the Department of Computer Science, serves as a testament to the power of community engagement in education, aiming to cultivate a generation of students who are prepared to lead and innovate in the digital age.
