# ABOUT THE CONFERENCE

Life Science is the study of the most complex thing in the universe – Life. The interdisciplinary field of applied biology focuses on the various aspects of life sciences such as Biotechnology, Microbiology, and Biochemistry. While biology remains the epicentre of the life sciences, technological advances have led to new specializations and interdisciplinary fields such as genomics, proteomics and metabolomics technologies that have revolutionized the course of this gigantic field. This field has gained immense popularity due to its continuous advancements in all sectors of human welfare.

The current conference brings the research, academia, and industry under common roof and provides a space to exchange their experiences, ideas, and views. We aim to create a multidisciplinary approach to research with bringing all the key players of life sciences research into a common brainstorming space that would promote the exchange of existing knowledge in their respective fields, further helping researchers translate an idea or an outcome into a larger purpose through versatile collaborations or guided routes.

## SDME SOCIETY®, UJIRE
